POLLY

LOAN TRADING **EXCHANGE**

Maximize gain on sale every time.

Polly's unified Loan Trading Exchange seamlessly connects buyers and sellers of mortgage loans to improve transparency, best execution, and workflow efficiencies throughout the loan sale and settlement cycle.

Sellers rely on Polly's cloud-native exchange to confidently sell more loans and optimize trades with confidence, enhance existing investor relationships, and expand their networks.

Mortgage lenders benefit from native rules and embedded logic to automate and optimize value on every loan, and:

- Gain unmatched visibility into best execution, including the ability to dynamically filter, sort, and rank execution options and evaluate real-time best ex across all channels
- Automate CRA eligibility, spec pay-ups, high balance, and more
- Tailor the exchange to their unique business processes, customizing unique bidding rules and bias at the buyer, agency, and co-issuer level
- Streamline workflows with seamless, turnkey API integrations to agencies, aggregators, and other best-of-breed mortgage technology providers

DAILY TIME SAVINGS
on loan trading and loan settlement

3 WEEKS
average implementation and onboarding time

INCREASE BPS
maximize monthly gain-on-sale when used with the Polly PPE

WORKFLOW AUTOMATION
unrivaled filter, sort, and rank functionality

> Polly built a revolutionary digital marketplace that is transforming the way loans are bought and sold in the secondary market. The exchange fully automated our capital markets functions that were previously manual from end to end. After so much focus on the front-end of the digital mortgage loan process, it's exciting to see tech innovation now automating essential post-closing processes such as loan trading.

Purpose-built solution

Polly's sophisticated Loan Trading Exchange was purpose-built by capital market experts to automate a myriad of workflows from bid to settle, not as an adjunct to a hedge system.

Automated delivery of loans

Harness the power of intelligent automation and a turnkey integration with MOZAIQ to rapidly and accurately deliver loans to investors and reduce costs per loan.

Advanced bidding tools

Create custom investor eligibility with a code-free rules editor, apply logic to direct sales, assign bidding rules, and dynamically filter, sort, and rank execution to evaluate best ex in real time.

Competitive, actionable analytics

Make informed and data-driven margin and pricing decisions in real time with granular insight into volume trends, price comparison and benchmarking, and profitability metrics.

One-click commit

Auto-commit loans to agencies or aggregators with the click of a button. Data is immediately pushed back to the hedge advisor and updated in both the PPE and LOS.

Complete loan transparency

Leverage unrivaled granularity to evaluate all components of a price, including SRP, AMI and other LLPAs, etc. Polly calculates this data to display a true holistic view of each and every loan.

Pool Builder

Create and manipulate pools of government loans and identify the immediate impact of every action tracked at the loan-, pool-, and/or execution-level.

API-first strategy

Polly's robust architecture facilitates unlimited granularity, flexibility, and configurability across dozens of bi-directional API integrations to agencies, aggregators, and mortgage tech providers.
